

CAN MY PHONE REALLY HELP ME PREVENT WORKPLACE INJURIES SPECIFIC TO MY JOB AND BODY MOVEMENT?

Short answer, Yes! altumAI has developed futureWork; the award-winning risk-avoidance technology that transforms your personal phone into your digital PPE at work to help you prevent and report work-related injuries in real-time.

futureWork captures data from disease risk to twists, bends, slips, trips, and falls to environment or time on the job to provide you with your own personalized daily risk score viewed in real-time on your phone. In addition to capturing the data, futureWork also communicates with you directly through the app on ways to eliminate your risk based on the data collected by sending you customized micro-training and easy access to your company safety programs and quick and easy in-app messaging. It's inevitable injuries and risks will still occur at work, and that's why futureWork is also there to support quick and simple incident reporting directly on your phone when you need it.

At altumAI, we develop technology to simply communicate risk to employers and employees so everyone can have a safer futureWork environment.
